

deepfreeze utilises a unique backup system that backs up your configuration on your system in a section of your hard drive called "system drives". this file is designed to have a complete backup of what you were previously working on. however, if you freeze the backup you can then unfreeze the system after restarting and even wipe the system. wiping the system does not delete the original backup copy, so you can use that to restore your system. if you freeze your system, the next time you reboot the software saves the current configuration to the "system drives" part of your hard drive. if you unfreeze your system you must first restore the "system drives" backup using your license code, and then allow the software to apply the settings which are saved. there is no crack or serial number for deep freeze ultra on this page. every software that you are able to download on our site is legal. there is no crack, serial number, hack or activation key for deep freeze ultra present here. our collection also doesn't contain any keygens, because keygen programs are being used in illegal ways which we do not support. all software that you can find here is freely downloadable and legal. the original tool was designed for windows xp and earlier. it was never compatible with windows vista, 7, or windows 8. the new
